

# Oculoplastics Product Catalog

[www.fciworldwide.com](http://www.fciworldwide.com)

FCI SAS is a world leader in the development of a wide range of ophthalmic surgical devices.

Since the company's inception in 1984, the innovative developments of FCI have helped physicians solve problems relating to retinal detachment, epiphora, dry eye, eyelids, and orbital surgery thanks to a wide range of innovative ophthalmic devices such as lacrimal balloon catheter, intubation sets without nasal retrieval, punctal plugs, eyelids and orbital implants.

FCI performs extensive research and development to provide physicians with outstanding products that enhance the efficiency and effectiveness of surgical procedures.

**This line of product is FCI latest commitment to provide you high performance products in oculoplastic surgery.**

## POLYVINYLPIRROLIDONE (PVP)

PVP is an exclusive surface treatment applied to FCI lacrimal products to improve the hydrophilic properties of silicone.

The benefit of such a treatment is to enhance the efficiency of tear drainage and to limit the accumulation of debris at the surface of our silicone intubations and perforated plugs.

## PUNCTAL STENOSIS

FCI PVP perforated plugs are used to treat excessive tearing due to partial occlusion of punctum and punctal stenosis. They act as a conformer by keeping the punctal opening dilated for several weeks, allowing tears to be drained through.

### PVP Perforated Plugs

Designed by J.-A. Bernard, M.D.

- PVP coated medical grade silicone
- Slanted collarette for a perfect anatomical fit against the eyelid margin
- Exclusive polishing for a perfectly smooth surface
- 2 models available: standard & mini
- Preloaded on a disposable plug inserter to facilitate the insertion
- Sterile

| PACKAGING |                                    |          |
|-----------|------------------------------------|----------|

## DACRYOCYSTOPLASTY

### Ophtacath®

Ophtacath® is a lacrimal duct balloon catheter kit indicated for the dilation of an obstructed nasolacrimal duct.

It consists of a semi-flexible stainless stylet covered by a tubing and finished by a Nylon Polyn® balloon.

The balloon catheter works with a disposable inflation system to dilate the obstructed nasolacrimal duct, which is a most efficient solution to treat rapidly and durably the symptoms of epiphora.

- Proven results
- Fast and efficient procedure
- Easy to insert & to remove
- Exclusive tapered tip
- Exclusive balloon design retains folding memory
- Exceptional resistance to burst pressure
- Highly precise inflation system
- Available in 2 diameters: 2 mm (infants) & 3 mm (adults)
- Unilateral or bilateral versions
- Includes disposable inflation device
- Sterile

OPHTACATH® BEFORE INFLATION

OPHTACATH® AFTER INFLATION

# INTUBATION SETS

## MONOCANALICULAR INTUBATION

### Mini-Monoka®

Designed by B. Fayet, M.D. & J.-A. Bernard, M.D.

- Indicated for monocular lacerations
- FCI exclusive design
- Gold standard for canalicular repair
- Requires 0.3 mm punctum plug dilator & plug inserter (S1.3090)
- Medical grade silicone – PVP option
- Sterile

|         |              | TUBE     |                | PACKAGING |

| S1.1500 | Mini Monoka® | 0.64 mm  | Silicone       | Box of 3  |
| S1.1520 | Mini Monoka® | 0.64 mm  | Silicone + PVP | Box of 3  |

## MONOCANALICULAR NASOLACRIMAL INTUBATIONS

### Masterka®

Masterka® is FCI latest innovation for treatment of congenital nasolacrimal duct obstruction resistant to probing.

Unlike the traditional “pulled” technique in which the stent is advanced through the nasolacrimal system and retrieved through the nose by pulling on the guide probe or thread, the Masterka® has no metallic probe or suture attached to it and, therefore, it is not pulled out of the nose.

Instead, the Masterka® is pushed into the nasolacrimal duct and anchored in place at the punctum by a plug-like fixation head.

- FCI exclusive design
- Easy to insert
- No nasal retrieval
- No knots
- No sutures
- Less traumatic
- Requires sizer (S1.1289) to select the length & 0.3 mm disposable punctum dilator and plug inserter (S1.3090)
- Available in 3 lengths: 30, 35 and 40 mm
- 3 mm plug collarette
- Medical grade silicone
- Sterile

S1.1609

S1.1289

|         |           | DIAMETER | LENGTH | PACKAGING |
|---------|-----------|----------|--------|-----------|
| S1.1608 | Masterka® | 0.90 mm  | 30 mm  | Box of 1  |
| S1.1609 | Masterka® | 0.90 mm  | 35 mm  | Box of 1  |
| S1.1610 | Masterka® | 0.90 mm  | 40 mm  | Box of 1  |

## INTUBATION SETS

### MONOCANALICULAR NASOLACRIMAL INTUBATIONS

FCI Monoka® intubation systems have been designed to effectively treat nasolacrimal duct obstructions and canalicular stenosis. The stents are securely anchored at the punctum by a plug-like fixation head.

#### Self-threading Monoka® (Ritleng® type)

Designed by B. Fayet, M.D. & J.-A. Bernard, M.D.

- FCI exclusive design
- Reduced trauma and procedure time
- 3 mm medium or 4 mm wide plug collarette
- PEEK (PolyEtherEtherKetone) black thread
- Requires 0.3 mm punctum plug dilator & plug inserter (S1.3090)
- To use with Ritleng® set of instruments (S1.1460, S1.1470, S1.1480)
- Medical grade silicone – PVP option
- Sterile

|         |                        | COLLARETTE |          | TUBE           |          | PACKAGING |

| S1.1810 | Self-threading Monoka® | Medium     | 0.64 mm  | Silicone       | Box of 3 |           |
| S1.1820 | Self-threading Monoka® | Wide       | 0.64 mm  | Silicone + PVP | Box of 3 |           |

#### Monoka® of Fayet (Crawford Guide)

Designed by B. Fayet, M.D. & J.-A. Bernard, M.D.

- FCI exclusive design
- 3 mm medium or 4 mm wide plug collarette
- Stainless steel probe with non-traumatic rounded olive tip
- Requires 0.3 mm punctum plug dilator & plug inserter (S1.3090)
- To use with the Crawford hook (S1.1275) for endonasal retrieval of the probe
- Medical grade silicone
- Sterile

## Monoka®

Designed by B. Fayet, M.D. & J.-A. Bernard, M.D.

- FCI exclusive design
- 3 mm medium or 4 mm wide plug collarette
- Non-traumatic metallic probe for adults (80 mm) and children (60 mm)
- Requires 0.3 mm punctum plug dilator & plug inserter (S1.3090)
- Medical grade silicone – PVP option
- Sterile

|         |                    | COLLARETTE | DIAMETER | TUBE MATERIAL  | PACKAGING |
|---------|--------------------|------------|----------|----------------|-----------|
| S1.1620 | Monoka® for infant | Wide       | 0.64 mm  | Silicone       | Box of 3  |
| S1.1630 | Monoka®            | Wide       | 0.64 mm  | Silicone       | Box of 3  |
| S1.1660 | Monoka®            | Wide       | 0.64 mm  | Silicone + PVP | Box of 3  |
| S1.1710 | Monoka®            | Medium     | 0.64 mm  | Silicone       | Box of 3  |

## Punctum dilator and plug inserter

- Necessary for the plug insertion of the Masterka®, Monoka®, Mini Monoka®, self-threading Monoka® & Monoka of Fayet® plugs

S1.3090

|         | Single use                        | PACKAGING |
|---------|-----------------------------------|-----------|
| S1.3090 | Punctum dilator and plug inserter | Box of 3  |

# INTUBATION SETS

## BICANALICULAR INTUBATION

### Autostable Intubation Set II

The Autostable Intubation Set II is indicated to treat punctal stenosis and horizontal lacrimal duct obstruction. Thanks to the rigid guides inside the silicone tube, the placement of the Autostable Intubation Set II is straightforward, and can be done as an office procedure.

- FCI exclusive design
- Silicone wings at each end ensure the stability in the lacrimal sac
- Central mark to control tube placement
- Supplied with disposable dilator
- Available in 3 lengths: 25, 30 and 35 mm
- Requires sizer (S1.1289) to select the appropriate length
- Medical grade silicone
- Sterile

|         |                              | LENGTH | TUBE     |          | PACKAGING |

|--|--|------------|--|
|  |  | S1.1289    | Sizer for Autostable Intubation Set II |

## BICANALICULAR NASOLACRIMAL INTUBATIONS

### FCI Nunchaku®

FCI Nunchaku® is a pushed silicone self-retaining bicanalicular nasolacrimal intubation stent that acts like a conformer, allowing tears to be drained by capillarity.

The metallic guides are located inside the lumen, not as an extension of the stent as in conventional intubation sets. Therefore, no nasal retrieval is needed.

The stability is guaranteed by the design of the silicone tubes: no need to make knots and sutures in the nasal fossa.

- Indicated for canalicular pathologies, congenital lacrimal duct obstruction & dacryocystorhinostomy (DCR)
- FCI exclusive design
- No nasal retrieval
- No knot or suture needed
- Available in 2 lengths: 90 mm (infants) and 105 mm (adults)
- Medical grade silicone
- Sterile

|         |               | LENGTH | TUBE     |          | PACKAGING |

# INTUBATION SETS

## BICANALICULAR NASOLACRIMAL INTUBATIONS

### Ritleng® Lacrimal Intubation Set

Ritleng® intubation system consists of a silicone (or PVP) tube connected at each extremity to a Poly Ether Ether Ketone (PEEK) thread guide to reduce time and trauma in lacrimal duct intubation surgery.

The procedure involves inserting the hollow Ritleng® Probe into the nasolacrimal duct and feeding the thin PEEK thread through it.

The probe is then withdrawn, leaving the PEEK to pull the silicone tubing into place.

- FCI exclusive design
- Less traumatic for patients
- Easy retrieval from the nose
- Medical grade silicone - PVP option
- Sterile

S1.1460

## INTUBATION SETS

### BICANALICULAR NASOLACRIMAL INTUBATIONS

FCI BIKA® intubation systems have been the first models designed for bicanalicular intubation, especially in case of congenital nasolacrimal duct obstruction and dacryocystorhinostomy (DCR).

The metallic probes are securely connected at the silicone tube for an easy and safe retrieval from the nose.

Designed by J.-A. Bernard, M.D.

- FCI exclusive design
- Strong connection between silicone tube and metallic probe
- Non-traumatic rounded tip
- Many different designs available

#### INFANT BIKA®

- 0.64 mm silicone tube / 55 mm long & 0.4 mm diameter metallic probe
- Probe embedded in silicone tube / Perfectly smooth junction
- Indicated for newborn
- Medical grade silicone
- Sterile

|         |              | LENGTH | TUBE DIAMETER | TUBE MATERIAL | PACKAGING |
|---------|--------------|--------|---------------|---------------|-----------|
| S1.1100 | Infant Bika® | 55 mm  | 0.64 mm       | Silicone      | Box of 3  |

#### INFANT BIKA® II

- 0.64 mm silicone tube / 60 mm long & 0.8 mm diameter metallic probe
- Indicated for infant
- Medical grade silicone – PVP option
- Sterile

|         |                 | LENGTH | TUBE DIAMETER | TUBE MATERIAL  | PACKAGING |
|---------|-----------------|--------|---------------|----------------|-----------|

# LACORRHINOSTOMY

## METAIREAU TUBES

- Indicated for irreversible canalicular epiphora
- Alternative to traditional Pyrex tubes
- Safe & comfortable for the patient
- Available in 2 collarette shapes: round (initial surgery) or oval (replacement)
- Medical grade PVP-coated silicone
- Sterile

|         |                | COLLARETTE | MATERIAL       | PACKAGING |

# PUNCTAL PLUGS

## PAINLESS PLUG®

FCI Painless Plug® is the ultimate result of our extensive research on dry eye syndrome for the last 30 years.

It relieves the discomfort associated with dry eye syndrome simply, quickly, effectively & durably and greatly improves the patients quality of life.

- FCI exclusive innovation
- One size fits all – No sizing needed
- Very high retention rate
- No dilation needed
- Ultra thin collarette
- Preloaded on disposable inserter
- Medical grade silicone
- Sterile

# PTOSIS

## PTOSE-UP®

FCI Ptose-up® is a strip of biomaterial made of expanded Poly Tetra Fluoro Ethylene (ePTFE) used to join the upper eyelid to the frontalis muscle in ptosis surgery with frontalis suspension.

Designed by J.-M. Ruban, M.D.

- FCI exclusivity
- Used for more than 30 years
- Biocompatible
- Biointegrable (70µm pores)
- Ready-to-use
- Excellent tolerance
- 150 mm long & 0.35 mm thick
- Two widths available
- Sterile

|         |           | WIDTH | MATERIAL | PACKAGING |
|---------|-----------|-------|----------|-----------|
| S3.3001 | Ptose-up® | 3 mm  | ePTFE    | Box of 1  |
| S3.3021 | Ptose-up® | 2 mm  | ePTFE    | Box of 1  |

## PTOSIS PROBE

FCI Ptois suspension set is indicated for ptosis surgery with frontalis suspension.

Designed by J.L. Louquet, M.D. & D. Guerin, M.D.

- Ultra sharp metallic needles
- Silicone tubing
- Perfect connection between silicone tubing & needles
- Sterile

S3.1000

## EYELID WEIGHTS

FCI eyelid weights are indicated for the treatment of the functional defects of lagophthalmos resulting from facial paralysis.

## THINPROFILE™ EYELID IMPLANTS

ThinProfile™ eyelid implants feature a sleek surface, anatomically friendly curvature with tapered edges and smoothly rounded corners.

- Available in platinum or gold
- Superior eyelid cosmesis
- Weight range from 0.6 g to 1.8 g
- 0.6 mm thickness / 5 mm width
- Enhanced patient satisfaction
- Sterile

### Platinum eyelid implant

- Smallest implant available: 11% higher density than gold
- Excellent biocompatibility
- Proven for gold-sensitive patients

| ThinProfile™ - Platinum | WEIGHT | PACKAGING |
|-------------------------|--------|-----------|
| S3.6006                 | 0.6 g  | Box of 1  |
| S3.6008                 | 0.8 g  | Box of 1  |
| S3.6010                 | 1.0 g  | Box of 1  |
| S3.6012                 | 1.2 g  | Box of 1  |
| S3.6014                 | 1.4 g  | Box of 1  |
| S3.6016                 | 1.6 g  | Box of 1  |
| S3.6018                 | 1.8 g  | Box of 1  |

### Gold eyelid implant

- 99.99% pure gold
- Excellent functional results

| ThinProfile™ - Gold | WEIGHT | PACKAGING |
|---------------------|--------|-----------|
| S3.4006             | 0.6 g  | Box of 1  |

| S3.4016             | 1.6 g  | Box of 1  |

# EYELID WEIGHTS

## CONTOUR™ EYELID IMPLANTS

Contour™ eyelid implants feature the original proven characteristics and design of FCI eyelid weights.

- 99.99% pure gold
- 1 mm thickness / 5 mm width
- Weight range from 0.6 g to 1.8 g
- Sterile

|         | Contour™ - Gold | WEIGHT | PACKAGING |
|---------|-----------------|--------|-----------|
| S3.3006 |                 | 0.6 g  | Box of 1  |
| S3.3008 |                 | 0.8 g  | Box of 1  |
| S3.3010 |                 | 1.0 g  | Box of 1  |
| S3.3012 |                 | 1.2 g  | Box of 1  |
| S3.3014 |                 | 1.4 g  | Box of 1  |
| S3.3016 |                 | 1.6 g  | Box of 1  |
| S3.3018 |                 | 1.8 g  | Box of 1  |

## EYELID WEIGHT SIZING SET

This set enables the ophthalmologist to select the appropriate eyelid weight.

The eyelid should close without difficulty and induce a slight ptosis of no more than 1.0 mm.

This set includes:

- A storage case
- 7 sizing weights from 0.6 g to 1.8 g
- 100 double-sided hypoallergenic adhesive strips
- For external use only
- A skin tone selector card to determine the eyelid weight that best approximates the patient's skin complexion

|                                  | PACKAGING |
|----------------------------------|-----------|
| S3.7000 Eyelid weight sizing set | Box of 1  |

## EXTERNAL EYELID WEIGHTS

FCI external eyelid weights provide those with lagophthalmos as a result of temporary facial paralysis or Bell's palsy with an immediate and easy to apply treatment.

- Easy-to-use
- Effective non-surgical eyelid closure treatment
- Available in 4 skin tones
- Weight range from 0.6 g to 1.8 g
- Supplied with 100 double-sided hypoallergenic adhesive strips
- Non-implantable, Non sterile

# ORBITAL IMPLANTS

## BIOCERAMIC ORBITAL IMPLANT

FCI Bioceramic orbital implants have become the new standard in orbital implant material.

These implants have an improved vascularization structure over other existing alternatives, allowing for quick fibrovascularization.

This bioceramic material is a biocompatible, bioinert, nontoxic, and non-allergenic substance. These implants are well-known by surgeons as a stable and easily handled implant for use in enucleation and evisceration procedures.

- Indicated for enucleation, evisceration and secondary implantation
- Made of 99% pure alumina (Al<sub>2</sub>O<sub>3</sub>)
- Material used in orthopaedic and dental fields with success for more than 30 years
- Porosity range: 200-550 μm
- Uniform interconnected pores, 85% of the total volume between 200 and 300 μm
- Strong and non-brittle material
- Rapid & complete fibrovascularisation
- Lightweight
- Easy to insert: less sticky & no velcro effect
- Low tissue reaction & low exposure rate
- Regular surface: less irritation & less inflammation
- 2 alternatives: sphere or egg shaped
- Sterile

## HYDROXYAPATITE (HA) ORBITAL IMPLANT

FCI synthetic hydroxyapatite implants offer a cost effective and environmentally conservative alternative to natural hydroxyapatite.

- Indicated for enucleation and evisceration
- Made of totally synthetic hydroxyapatite
- Porosity range: 300 – 500 $\mu$ m
- Sterile

|         | HA | DIAMETER | PACKAGING |

S6.10XX

## BIOPSY CANNULAS

FCI biopsy cannulas are designed for endocular cytoponction in case of uveal and/or choroidal melanoma.

### EXTRA SHORT BEVEL CANNULAS

Thanks to its extra short 1 mm bevel, these cannulas will penetrate smaller tumours easily & allow the surgeons to have the best sample possible to analyse.

- Luer-lock connector
- 60 mm long
- 23 and 25 Ga
- Sterile

|            | Single use                  | 23 Ga | LENGTH | PACKAGING |
|------------|-----------------------------|-------|--------|-----------|
| S6.0060.23 | Extra short 1 mm bevel edge |       | 60 mm  | Box of 5  |

|            | Single use                  | 25 Ga | LENGTH | PACKAGING |
|------------|-----------------------------|-------|--------|-----------|
| S6.0060.25 | Extra short 1 mm bevel edge |       | 60 mm  | Box of 5  |

### ENGRAVED CANNULA

The 1 mm-engraved 30 mm long cannula will enable the surgeons to control their progression into the eye very safely. The first mark is located at a 2 mm distance from the tip.

- Luer-lock connector
- 30 mm long
- 23 Ga
- Sterile

|            | Single use                            | 23 Ga | LENGTH | PACKAGING |
|------------|---------------------------------------|-------|--------|-----------|
| S6.0030.23 | Graduated extra short 1 mm bevel edge |       | 30 mm  | Box of 5  |

## ACCESSORIES

### PESS IMPLANT

Fragments of the PESS implant are introduced into the orbital fat to restore volume and to improve cosmetic appearance in Post Enucleation Socket Syndrome. The PESS implant's pore structure allows colonization by fibrovascular tissues.

Developed by J.P. Adenis, M.D.

- Made of Hydroxyapatite (HA) 75% - Tricalcium Phosphate (TCP) 25%
- Porosity range: 250 - 550 $\mu$ m
- Sterile

| Single use |              | MATERIAL | PACKAGING |
|------------|--------------|----------|-----------|
| S6.5300    | Pess implant | HA, TCP  | Box of 1  |

### SIZERS

Sizers are designed to accurately select the appropriate orbital implant diameter in case of enucleation / evisceration

#### Sizers Set

- 4 sizers: 14, 16, 18 and 20 mm
- Made of PolyOxyMethylene (POM)
- Sterile

| Single use |            | MATERIAL | PACKAGING |
|------------|------------|----------|-----------|
| S6.3060    | Sizers set | POM      | Box of 4  |

#### Sizers

- 6 sizes available
- Stainless steel
- Non sterile

| Reusable |       | DIAMETER | MATERIAL        | PACKAGING |
|----------|-------|----------|-----------------|-----------|
| S6.3012  | Sizer | 12 mm    | Stainless steel | Box of 1  |

| S6.3020  | Sizer | 20 mm    | Stainless steel | Box of 1  |
| S6.3022  | Sizer | 22 mm    | Stainless steel | Box of 1  |

## CONFORMERS

Perforated conformers from FCI maintain the conjunctival cul-de-sacs after enucleation or evisceration without hindering lid closure.

- Perforations allow for post-operative instillation of eye drops and drainage of secretions
- Available in 2 models: rigid or flexible
- Translucent
- Single use

### Rigid conformers

- Made of polyamide 12
- Available in 3 sizes
- Sterile

|         | Single use                  | DIAMETER | PACKAGING |
|---------|-----------------------------|----------|-----------|
| S6.2230 | Perforated conformer small  | 20 mm    | Box of 1  |
| S6.2231 | Perforated conformer medium | 23 mm    | Box of 1  |
| S6.2232 | Perforated conformer large  | 26 mm    | Box of 1  |

S6.22XX

### Flexible conformers

- Made of silicone
- Sterile

|         | Single use | PACKAGING |
|---------|------------|-----------|
| S6.2001 | Conformer  | Box of 1  |
| S6.2005 | Conformer  | Box of 5  |

S6.2001

## SYMBLEPHARON RINGS

Symblepharon rings are designed to prevent retraction of the conjunctival cul-de-sacs without touching the cornea.

- Made of PMMA
- Translucent
- Sterile

|         | Single use        | DIAMETER | PACKAGING |
|---------|-------------------|----------|-----------|
| S6.2420 | Symblepharon ring | 20 mm    | Box of 1  |
| S6.2422 | Symblepharon ring | 22 mm    | Box of 1  |
| S6.2425 | Symblepharon ring | 25 mm    | Box of 1  |

S6.24XX

# SELF-INFLATING TISSUE EXPANDERS

OSMED self-inflating tissue expanders are made of a specially developed hydrogel that uses the osmotic principle to gain volume.

These implants are indicated in the treatment of clinical anophthalmia, congenital microphthalmia and post-enucleation socket syndrome. After implantation, OSMED hydrogel implants start to absorb body fluid and grow consistently to a predefined form and volume.

The increased volume of the implant – between 7 to 12 fold, depending on the product type – leads to an increase of soft tissue.

- High biocompatibility
- Similar hydrogel also used in soft contact lenses
- Low complication rate
- Controlled swelling
- No search for valve
- Different shapes to cover various indications

## HEMISPHERES

- Expansion of the conjunctival sac with clinical anophthalmia
- Enlargement of the surface of the mucous membrane
- Creation of a fold abutment / support for artificial eye prothesis
